Site Characterization: The Definition of Archaeological Sites using Plowzone Excavation Data

Derek Wheeler and Sara Bon-Harper, Monticello Department of Archaeology

1. Monticello’s Home Farm Quarter

The Monticello Home Farm Quarter is the site of Monticello and the primary location of Thomas Jefferson’s home and plantation. The Home Farm Quarter is composed of two semi-discrete artifact clusters of known houses at the Home Farm Quarter. The Home Farm Quarter is made up of two semi-discrete artifact clusters. The Home Farm Quarter is comprised of two semi-discrete artifact clusters. The Home Farm Quarter is comprised of two semi-discrete artifact clusters. The Home Farm Quarter is comprised of two semi-discrete artifact clusters. The Home Farm Quarter is comprised of two semi-discrete artifact clusters.

2. Site excavation and discovery of features

The site was excavated using a stratigraphic sequence of 2x2 foot quadrats. The site was excavated using a stratigraphic sequence of 2x2 foot quadrats. The site was excavated using a stratigraphic sequence of 2x2 foot quadrats. The site was excavated using a stratigraphic sequence of 2x2 foot quadrats. The site was excavated using a stratigraphic sequence of 2x2 foot quadrats.

3. Interpretation of survey and excavation data

Initial interpretations of the STP data suggest two or more artifact clusters. However, since most of the STP data are stratigraphic, it is not possible to interpret the data accurately. Interpreting the data accurately is not possible to interpret the data accurately. Interpreting the data accurately is not possible to interpret the data accurately. Interpreting the data accurately is not possible to interpret the data accurately.

4. The Home Farm Quarter’s components

The components for both sites have a strong temporal factor. The components for both sites have a strong temporal factor. The components for both sites have a strong temporal factor. The components for both sites have a strong temporal factor. The components for both sites have a strong temporal factor.

5. Defining houses and middens

We anticipated that the midden features would have identifiable middens, and the known house locations would be recognizable from their middens as well. These features are one of the two known house locations are found in the vicinity of high-density artifact scatters. The fourth house, Site 8 House 2, is that of the other known house at the Home Farm Quarter.

6. Domestic behavior and refuse patterns

The proportions of tableware, dinner wares, and utilitarian wares reveal patterns that are consistent with CA groupings that partially overlap the known house names. Proportions of tableware, dinner wares, and utilitarian wares reveal patterns that are consistent with CA groupings that partially overlap the known house names. Proportions of tableware, dinner wares, and utilitarian wares reveal patterns that are consistent with CA groupings that partially overlap the known house names.

7. Site definition

The site has been defined as a site for the purpose of this study. The site has been defined as a site for the purpose of this study. The site has been defined as a site for the purpose of this study. The site has been defined as a site for the purpose of this study. The site has been defined as a site for the purpose of this study.
